

Dear colleagues,

The Leishmaniasis Program at WHO/NTD and the EU projects "LeishMed" and "LeishRisk" have developed a new concept for a bibliographical information tool entitled "e-compedium". This new online application georeferences the epidemiological literature of the past 25 years. In fact, the first draft version comprises information of 60 endemic countries of Africa, America and the Mediterranean Basin but since it is a dynamic tool we hope to improve it soon after your valuable feed back and to update the information of Asia. During WorldLeish4 (Tuesday 3rd of February, room H1, epidemiology session from 14:30 to 17:30) more details will be given.
